

The Long Wait is Over!

In the middle of the Ohio State University Campus, the Multispecies Animal Livestock Complex (MALC) is now open! Besides giving existing and future students, a front row seat to the dairy industry, the College of Food, Agriculture, and Environmental Sciences (CFAES) has unfolded a facility multiple species where advanced technology will reshape how students prepare for careers in modern animal agriculture.

The state-of-the-art dairy facility is home to 75 Jersey cows. That are enrolled in the REAP program. The facility was designed not only to teach and train students, but to also conduct research on the challenges facing today's industry. Classrooms and a large arena in the MALC enhance the opportunity to unify education, experience, research, and outreach activities for students, the community, and animal agriculture.

If you are a student looking for a university program to further your career, this facility is where innovation, education, and YOUR future will be aligned with the very finest facility right on campus.
