# Jersey Milk Continues to Increase Cheese Yield

The American Jersey Cattle Association (AJCA) reports that the official lactation average for the Jersey breed is now 20,009 lbs. milk, 969 lbs. fat and 742 lbs. protein on a standardized mature equivalent (m.e.) basis. On a Cheddar cheese yield basis, average production is 2,520 lbs. The number of records included in the breed average for 2019 is 100,904.

The announcement is a mixed bag of news for the Jersey industry. The good news is that cheese yield per hundred-weight of Jersey milk continues to rise. Yield now stands at 12.59 lbs., up from 12.58 in 2018.

In terms of volume, protein essentially held its own, while yield for milk, fat and cheese declined, along with the number of records in the breed average. The 2019 lactation average represents an increase of 1 lbs. protein and a decrease of 39 lbs. milk, 8 lbs. fat and 1 lbs. cheese as compared to 2018.

The breed average for actual production for 2019 is 17,528 lbs. milk, 854 lbs. fat, 649 lbs. protein and 2,207 lbs. cheese yield. These measures are down 102 lbs. milk, 9 lbs. fat, 1 lbs. protein and 8 lbs. cheese yield versus 2018. Jersey production peaked in 2017 at 20,150 lbs. milk, 985 lbs. fat and 743 lbs. protein on an m.e. basis. Actual production was 17,666 lbs. milk, 867 lbs. fat and 650 lbs. protein.

The number of records included in the 2019 average ranks fifth high in breed history, down 862 herds from 2018. The number of cows included in the breed lactation average peaked in 2015 at 113,897 and has declined slightly with the implementation of Generation Count qualifications.

Because profitability is determined by more than milk yield alone, and, because dairy producers have managed their herds in less-than-ideal conditions in recent years, Jersey breeders should be mindful of the numbers but not swayed by them. Ultimately, goals are being met and the Jersey breed is growing and moving forward.

What these numbers tell us is that Jersey milk is getting more nutrient-dense every year, especially in terms of protein, one of milk's most valuable nutrients. This is promising news. In its recently released export report for 2019, the International Dairy Foods Association notes U.S. dairy exports surged to \$5.93 billion, up 8% from 2018 and on par with the high-water mark for 2014. At the top of the list were milk concentrated powders, cheese and curds and whey—not fluids. Exports to our two closest neighbors, Mexico and Canada, were up 11% and 4%, respectively.

This component advantage makes Jersey milk an easy choice for export products and for processors. It also makes Jerseys an easy choice for dairy farmers who are paid fairly for the components in their milk. Though the component advantage may be what gets her foot in the door of other-breed herds, it is other advantages, like feed efficiency, reproductive efficiency and longer herd life, that enable her to prove herself to her caretaker. While mixed-breed herds accounted for just 2% of the herds in 1998, they now represent nearly 11% of domestic dairy herds. Jersey semen sales-our greatest key indicator of future growth-accounted for 5.4% of market share two decades ago and now represent 15% dairy cattle semen sales.

To keep its competitive advantage, the Jersey breed needs to increase production, maintain (or improve) components and maintain optimum cow size for efficiency and health as identified by the Capper

Cady environmental impact study (Journal of Dairy Science, Volume 95, Issue 1).

Based on statistics of the previous 10 years, the breed lactation average is projected to reach 21,157 lbs. milk, 1,058 lbs. fat and 796 lbs. protein by 2025, with a cheese yield equivalent of 2,707 lbs. Cheese makers are projected to be able to make 12.80 lbs. of product per hundredweight of Jersey milk by 2025.

In this annual production summary, the *Jersey Journal* includes lactation averages for individual herds calculated on a standardized 305-day, twice daily milking, m.e. basis and an actual basis. Production is included for lactations meeting the registry minimum of Generation Count 4 and higher. Records included in the average have data collection ratings of 85 or higher. Herds identified in the rankings have a minimum of 10 cows.

#### High M.E. Herds for Milk

Last year's top protein producer, Cinnamon Ridge Jerseys, Donahue, Iowa, retains its top ranking for protein and leads the nation for milk and cheese yield this year as well. The 185-cow herd owned by John and Edwin Maxwell has a 2019 lactation average (m.e.) of 26,768 lbs. milk, 1,254 lbs. fat and 1,014 lbs. protein. On a cheese yield basis, production is 3,378 lbs. The dairy ranks third for fat.

Cinnamon Ridge Jerseys also ranks first for milk, protein and cheese yield and eight for fat on an actual basis with 23,710 lbs. milk, 1,119 lbs. fat, 899 lbs. protein and 3,002 lbs. cheese yield.

The Maxwells improved production of the herd in 2019 by about 200 lbs. milk on both an m.e. and actual basis to retain their top rankings. Several members of the herd contributed to this effort, including four

Two herds owned by California Jersey breeder James Ahlem and his family return to the top rankings again this year. Ahlem Foothill Farms of Turlock ranks fifth for milk and sixth for protein with a 2019 lactation average (m.e.) of 24,149 lbs. milk, 1,149 lbs. fat and 873 lbs. protein on 2,163 cows. The home dairy in Hilmar ranks seventh for milk with a 2019 lactation average of 23,440 lbs. milk, 1,066 lbs. fat and 846 lbs. protein on 2,250 cows.

The dairies also rank among the breed's best for genetic merit. The James Ahlem dairy ranks #7 in the nation with a herd average JPI of +94. Eighty-five percent of the milking herd has been genotyped. Ahlem Foothill Farms ranks #17 with a herd average JPI of +88 on 2,681 cows.

The top milk producer at Ahlem Foothill Farms, JX Foothill Hobbit 21195 {5}, Very Good-84%, made more than 25,000 lbs. milk actual as a senior two-year-old and then produced one of the year's top 305-day records (29,980 lbs. milk, 1,723 lbs. fat, and 1,187 lbs. protein) as a senior three-year-old. She ranks on the current list of the Top 200 Cows for GJPI with an index of +173. She is an equity builder for Ahlem, with three daughters by natural birth in three calvings. The youngest, JX Foothill Altarozier 32366 {4}, also ranks for genetic merit with a Parent Average JPI of +168.

The 50-cow Registered Jersey dairy owned by North Carolina State University, Raleigh, N.C., ranks among the breed's best again this year with a 2019 lactation average (m.e.) of 23,450 lbs. milk, 1,058 lbs. fat and 857 lbs. protein. The dairy farm, home to the well-known Randleigh research herd, ranks sixth for milk and 10th for protein.

True Farms, Perry, N.Y., joins the list of the nation's top herds for the first time with a 2019 lactation average (m.e.) of 23,393 lbs. milk, 1,297 lbs. fat and 843 lbs. protein on 12 cows. The average ranks eight for milk and second for fat.

The dairy also ranks among the breed's best for actual production with a 2019 herd average of 22,621 lbs. milk, 1,218 lbs. fat and 791 lbs. protein. The measures rank second for milk and fat and sixth for protein. The cheese yield equivalent of 2,735 ranks fourth in the country.

## Policy for Maximizing Profit with Jerseys

The American Jersey Cattle Association (AJCA) Board of Directors encourages its members to employ the following management practices to improve herd profitability:

## Maximize the genetic potential of the herd by

- Making a minimum of 80% of all matings to a group of genotyped young bulls enrolled in progeny test programs.
- Breeding heifers A.I. to proven or selected young bulls that are enrolled in progeny test programs; if natural service for heifers is a management necessity, using bulls that qualify for those programs.
- Maintaining accurate identification and breeding records.
- Participating in AJCA performance and functional type appraisal programs that provide the basis for genetic evaluations.
- Making mating assignments that maximize profit and minimize inbreeding.

## Challenge the genetic capacity of the herd by

- Feeding ample quantities of properly balanced rations to milking cows.
- Minimizing involuntary culling so that voluntary culling can be maximized.
- Providing for the special nutritional and management needs of dry cows.
- Having cows in proper body condition.
- Providing special attention to calf raising practices to minimize losses and optimize growth.
- Using new technologies that provide economical advantages in your situation.

#### **Exploit Jersey advantages by**

- Using tamper-evident ID and registering calves before they are six (6) month of age.
- Freshening heifers under 24 months
   of age.
- Becoming involved in milk marketing efforts that gain equitable payment for milk components.
- Becoming involved in cattle marketing efforts that supplement herd income.
- Using your herd and farm to project a positive image for the Jersey breed and the dairy industry.
